

Instructions for Home Patch Test Removal

Removal

- Have someone remove your patches on **Wednesday afternoon or evening**. The patches should be on for at least 48 hours.
- Take a photo **before** removal. After removal, throw the patches away.
- Please have whoever is removing your patches trace all of the numbers and brackets (as shown in the examples). You may use the skin marker provided or permanent marker.
- Do not shower or exercise after removal. Please re-trace the numbers and brackets as needed.

Photos (after removal)

- Since we are not able to assess your back in person on Wednesday, it is very important that you take good photos to document your findings.
- Please take a picture of the entire back (see Example 1).
- Then please take additional close up photos of each panel (Example 2).
- Bring these photos to your visit on Friday (on a camera or your phone). You do NOT need to email the photos to us.
